

# Enterprise Copy — Before & After

Source: OpenText About page ([opentext.com/about](https://opentext.com/about)) · Rewrite: Flex Munene · [flexmunene-eng.github.io/Portfolio](https://flexmunene-eng.github.io/Portfolio)

---

The original copy says the right things in the wrong way — vague motion language, self-praise without evidence, marketing phrases in places that need plain description. Each rewrite keeps the meaning and cuts the noise.

## Excerpt 1 — Product description

### BEFORE

Our software is designed to propel businesses forward with cloud, security, and AI tools that facilitate enterprise-level growth and innovation.

### AFTER

OpenText makes software that helps large organizations manage data — storing it, controlling who can access it, and pulling useful insight from it. The core products cover cloud infrastructure, cybersecurity, and AI-assisted analytics.

#### What changed

- "Propel businesses forward" — vague motion language that says nothing specific.
- "Facilitate enterprise-level growth and innovation" — two of the most overused phrases in B2B copy, used together.
- After: names what the software actually does (store, control, analyze) instead of promising growth.

## Excerpt 2 — Values section

### BEFORE

We conduct business ethically and responsibly. Ethics are deeply embedded in our culture, driving decision-making and integrations. We go beyond the legal requirements, prioritizing moral behavior, respect for human rights, and a nature positive world.

### AFTER

OpenText holds itself to a higher standard than legal compliance alone. That means human rights considerations are built into procurement decisions, not addressed after the fact. The company has committed to being nature positive — restoring more than it consumes — by 2030.

#### What changed

- "Ethics are deeply embedded in our culture" — abstract self-praise with no evidence.
- "Driving decision-making and integrations" — integrations is a product term awkwardly grafted onto a values statement.
- After: replaces claims with specifics (procurement decisions, 2030 nature-positive target).

## Excerpt 3 — Platform overview

#### BEFORE

The OpenText Information Management portfolio offers solutions to master modern work, digitize supply chains, deliver communication-centric experiences, be cyber resilient and unleash developer creativity with APIs.

#### AFTER

The platform covers content management, supply chain coordination, cybersecurity, and developer tools. It's built to connect across departments — not just serve one team.

#### What changed

- *"Master modern work" and "unleash developer creativity" — marketing copy that belongs in an ad, not a product overview.*
- *"Communication-centric experiences" — four words to say "messaging" or "notifications."*
- *After: shorter, plainer, still complete. Reads like a human wrote it.*
